Skills Summary

Languages: JavaScript, TypeScript
Frameworks: NodeJS, ExpressJs
Librarys: ReactJs,Bootstrap
Tools: GIT, MongoDb, PostgreSQL, Sequelize, Mongoose
SoftSkills: Responsibility, Positive Attitude, Quick Learner, Flexibility, Time Management, Teamwork

Experience

Najot Ta'lim
FullStack Web Developer (internship) *April 2023-May 2023*
During my internship at Najot Talim, I had the opportunity to work as a full stack developer. This experience allowed me to gain practical hands-on experience in developing both front-end and back-end components of web applications, honing my skills in creating comprehensive and cohesive solutions.

CodeCrafters
Backend develope *May 2023 - Present*
As a seasoned Backend Developer at Code Crafters, a self-employed company, I bring a wealth of experience in working effectively within a team and adapting to remote work environments. Collaborating closely with colleagues, I have honed my ability to communicate and coordinate tasks to achieve shared goals. Additionally, I have developed strong self-management skills, allowing me to excel in remote work settings by staying organized, motivated, and delivering results independently.

Projects

- **Chat app** - I created a dynamic chatting website with user authentication, registration, user search, profile picture setting, real-time messaging, and other essential features.The technologies used for this project include Express.js for the backend, Socket.io for real-time communication, and MongoDB for data storage.

- **Online video cource** -I developed two Telegram bots that provides assistance in streamlining and automating various processes. The first bot automates the posting of IT job vacancies or worker ads to a Telegram channel. After an admin confirms the ad, the bot publishes it to the designated channel. The second bot streamlines the process of finding a taxi or matching passengers with available rides by posting relevant information and asking specific questions in a Telegram channel. (For more detailed information about the project, please refer to the README file in the repository.)
